DETAILED ACTION

Receipt of request for extension of time (granted) filed 10-5-01 is acknowledged.

Continued Prosecution Application

The request filed on 10-5-01 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/202,216 is acceptable and a CPA has been established. An action on the CPA follows. The amendment filed 9-5-01 has been entered and claim 1 has been amended as requested. Claims 1-7 and 9-12 are pending.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-7 and 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murphy et al (4,820,518; hereafter '518) in view of Clark et al (3,767,443; hereafter '443).

'518 teaches cosmetic powder products where are powder particle that is the same as those of the instant specification is coated with mixtures of pigments. '518 does not teach the limitation where layers have different refractive indexes.

Application/Control Number: 09/202,216

Art Unit: 1615

'443 is relied upon for teaching multilayer-coated powder pigments comprising plural layers of a metal oxide and an organic film-forming substance that have different refractive indexes which result in particles that have a greater reflectance than those without layers that have different refractive indexes (abstract; C 9, L 45-46).

Accordingly, it would have been obvious to one skilled in the art at the time of the invention to combine '518 and '443 to increase the reflectance of the particles of '518. Furthermore, manipulation of the thickness of the coatings would be obvious to one skilled in the art based upon the teachings of '443 at C 6, L 3-45 with the expectation that this would alter the refractive index of the coatings and provide a desired color; the motivation lying therein.

Response to Arguments

3. Applicant's arguments with respect to claims 1-7 and 9-12 have been considered but are most in view of the new ground(s) of rejection.
